CERTIFICATIONS

Cisco Junior Cybersecurity Analyst
Full Path — Completed

Cybersecurity Specialization
Netzun

TECHNICAL SKILLS

Hardening & Firewalls
UFW, nftables, arptables — deny-by-default policy, Zero Trust

Traffic Analysis
Wireshark, tcpdump, tshark — L3/L4/L7 filtering, SYN scan detection

Networking & Segmentation
VLANs (802.1Q), subnetting (ipcalc), DNSSEC, L3 routing

Layer 2 Security (ARP)
Static ARP, arpwatch, arping, ARP Spoofing mitigation

Packet Scripting
Scapy — low-level packet crafting and analysis

Penetration Testing
Nmap, Metasploit, Burp Suite

Operating Systems & Containers
BlackArch, Parrot OS, Kali Linux, Windows, Docker

SIEM & Detection
Wazuh (Manager/Indexer/Dashboard), Zabbix, custom correlation rules mapped to MITRE ATT&CK, FIM, vulnerability management, Active Response

Full-Stack Development
Spring Boot, JWT/BCrypt, JavaScript, AI API integration

Databases
MySQL/MariaDB, PostgreSQL, SQL Server, Firebird

LANGUAGES

Spanish
Native

English
B1

AVAILABILITY

Night shift available
Remote — international positions

Ronaldiño Joanlu Espinoza Rosario
SOC ANALYST TIER 1/L1 • JUNIOR FULL-STACK DEVELOPER

PROFESSIONAL SUMMARY

Undergraduate Systems Engineering student (8th semester) with a dual profile in defensive cybersecurity and full-stack development. Designs and operates a fully functional SOC on Wazuh (Manager, Indexer, and Dashboard deployed via Docker), with custom correlation rules mapped to MITRE ATT&CK, File Integrity Monitoring (FIM), vulnerability management, and automated active response, complemented by infrastructure monitoring in Zabbix. Trained through the full Cisco Junior Cybersecurity Analyst path, with active practice on LetsDefend and TryHackMe (alert triage, IOC, TP/FP, NIST SP 800-61 lifecycle). As a developer, builds full-stack applications (Spring Boot, MariaDB, JWT/BCrypt) — including his own portfolio with a live SIEM dashboard and an integrated conversational AI assistant — giving him insight into both infrastructure attack/defense and the code of the applications he protects. Fully available for night shift and remote positions.

PRACTICAL EXPERIENCE & LABS

SOC Implementation with Wazuh & Zabbix Personal Lab
Full deployment of an open-source SIEM architecture in a personal lab environment.

- Deployed Wazuh architecture (Manager, Indexer, Dashboard) via Docker Compose; integrated agents with FIM, syscollector, and rootcheck for endpoint monitoring.
- Developed custom rules and decoders (local_rules.xml) mapped to MITRE ATT&CK techniques, with rule chaining (if_sid) to reduce alert fatigue.
- Configured File Integrity Monitoring for webshell detection, the vulnerability detection module (CVE), and Active Response for automated containment (firewall-based IP blocking).
- Performed threat hunting via direct queries to the OpenSearch API; monitored infrastructure health and availability with Zabbix.

Wazuh • Docker • MITRE ATT&CK • FIM • Zabbix • OpenSearch

Network Infrastructure Hardening — Self-Directed Practice BlackArch / Parrot OS
Personal lab environment; end-to-end Zero Trust approach.

- Configured firewalls with a deny-by-default policy (UFW/nftables): SSH brute-force mitigation via rate-limiting and "invisible mode" against ICMP scanning (DROP vs. REJECT), replicated on Debian/apt and Arch/pacman.
- Audited network layers 2-7 (ip/ss, tcpdump/tshark) with SYN scan detection and exposure of unencrypted HTTP traffic; verified DNS integrity (DNSSEC/dig) and designed segmentation with VLANs (802.1Q) and subnetting (ipcalc).
- Mitigated ARP Spoofing with static ARP entries and passive IP ↔ MAC monitoring (arpwatch, arping); crafted and analyzed low-level packets with Scapy.

UFW • nftables • tcpdump • Scapy • VLAN/802.1Q • DNSSEC • ARP Hardening

SOC Alert Triage — LetsDefend & TryHackMe Ongoing Practice
Real-world SOC environment simulation (SIEM, log analysis, Blue Team rooms).

- Classified High/Medium/Low severity alerts: web attacks (SQLi, XSS), malware, brute force, and phishing, documenting IOCs and verdicts (TP/FP) per the NIST SP 800-61 response lifecycle.
- Decomposed multi-stage payloads (e.g., SQL Injection chained with an RCE attempt) and managed cases end-to-end with structured incident escalation.

SIEM • IOC • TP/FP • NIST 800-61

Full-Stack Cyber Portfolio with Integrated SIEM Personal Project

- Developed and deployed a security dashboard with request monitoring and real-time alert visualization (live SIEM log stream).
- Implemented secure authentication (JWT + BCrypt) and a logging system to detect and analyze web threats.
- Integrated a conversational AI assistant as a technical auditor for the portfolio itself (Spring Boot backend + LLM API consumption).

Spring Boot • MariaDB • JavaScript • JWT/BCrypt • AI API

EDUCATION

Systems Engineering 2026
Universidad Nacional de San Martín (UNSM) — Tarapoto, Peru | 8th Semester
